BOOK

For this assignment, students were each assigned a single word from architectural code and asked to investigate its meaning through research, observation, and design. The process involved looking through ADA standards and building codes, documenting real-world examples, and translating those findings into an artist book where both the content and physical form reflected the complexity of the assigned term.

Accessible	Floor	Plane
Assembly	Habitable	Ramp
Canopy	Lot	Stair
Common	Mezzanine	Story
Dwelling	Occupancy	Use
Field	Path	Wall

For this assignment, students exchanged code books with a partner and designed an appendix responding to a “what if” question based on the original project.

MEZZANINE

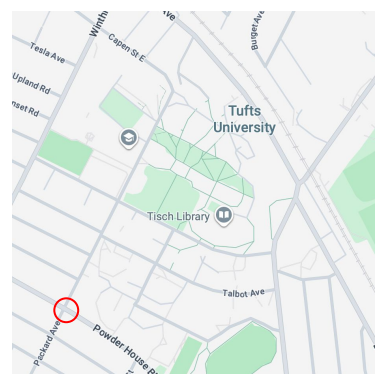

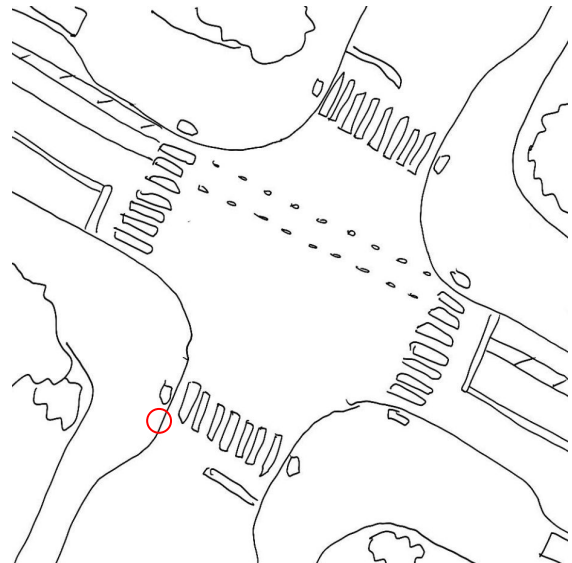

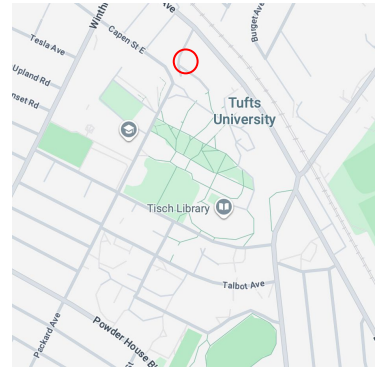

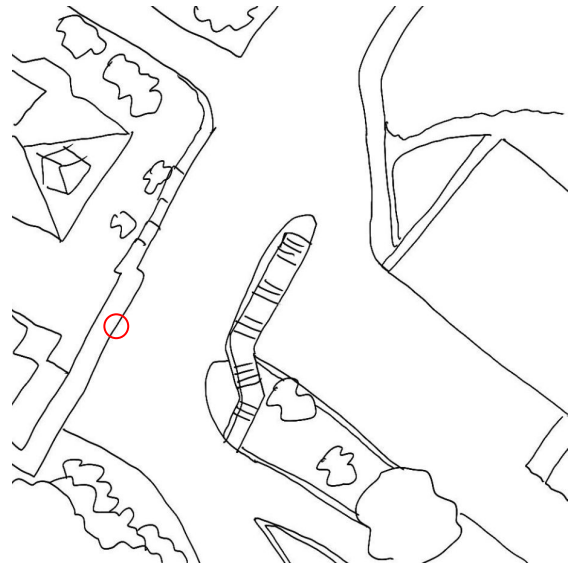

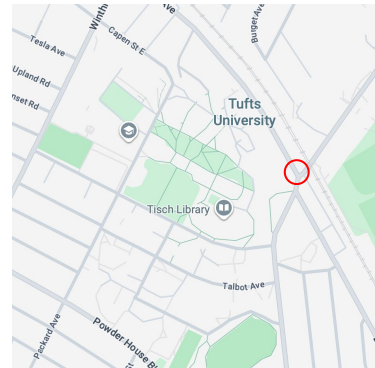

STORY

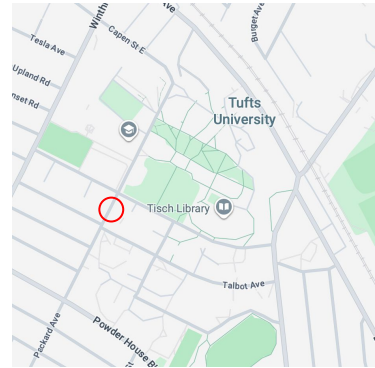

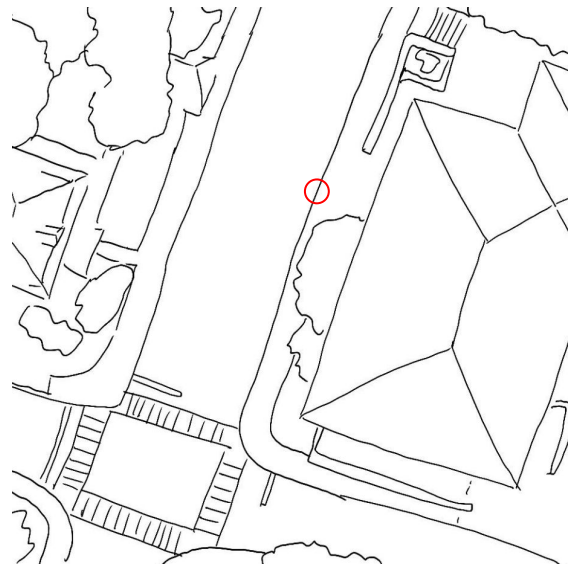

STICK

For this assignment, students used their assigned code book word to guide a walk and notice a moment or story connected to it. This experience was then translated into a story stick and a legend drawing(s) to represent said experience.

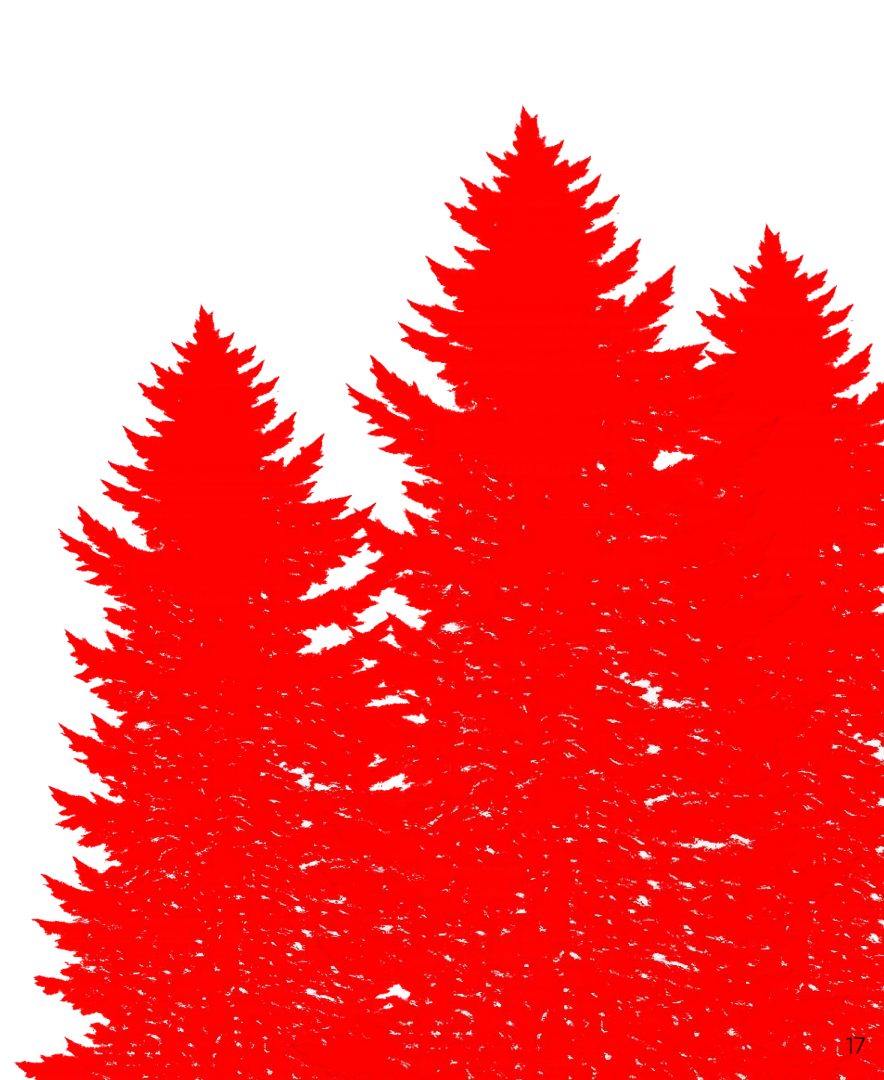

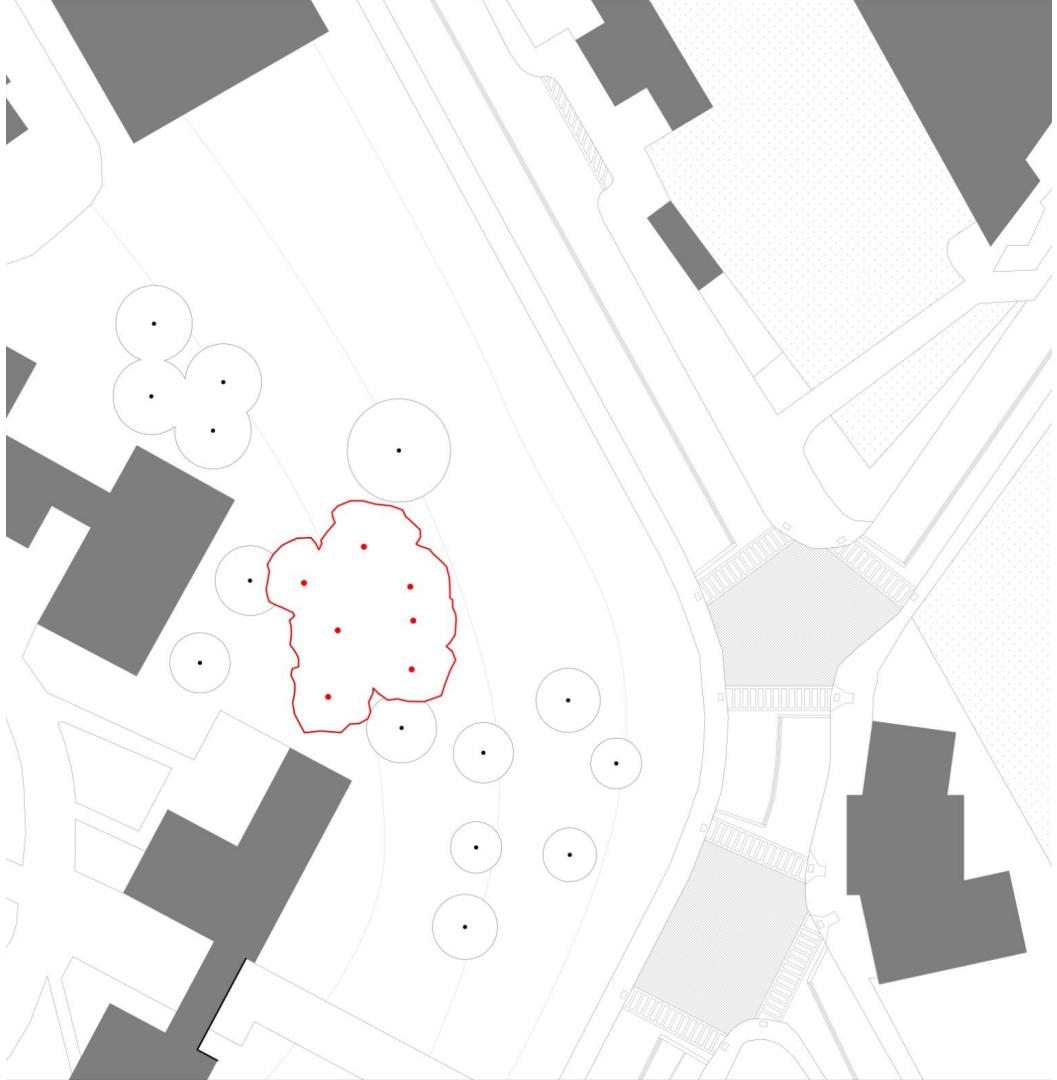

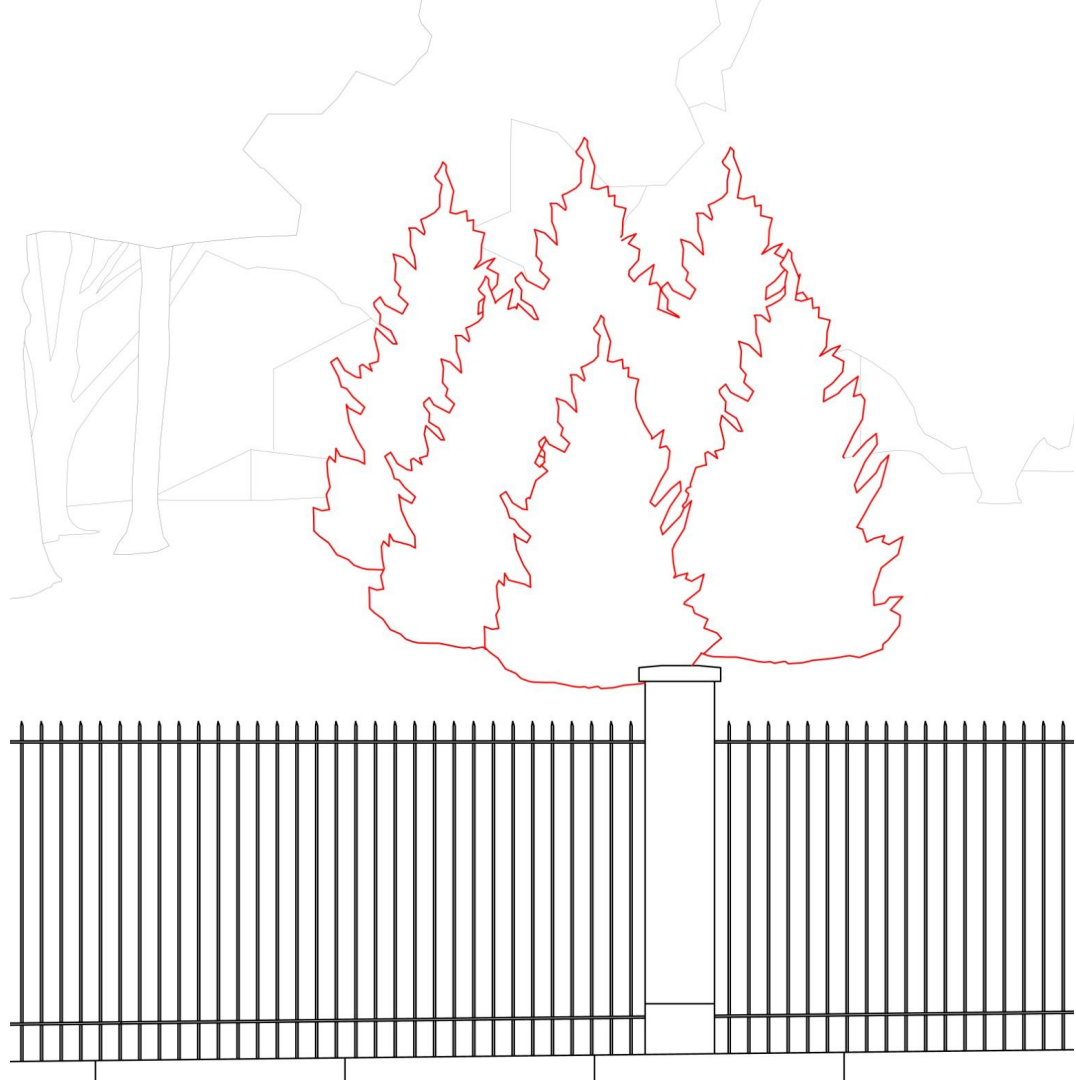

WHAT IF? INTERVENTION
WHAT IF? INTERVENTION

WHAT IF? INTERVENTION
WHAT IF? INTERVENTION

For this assignment, students identified a need they noticed on their walks and considered who or what it affects. They then designed an intervention to address that need.

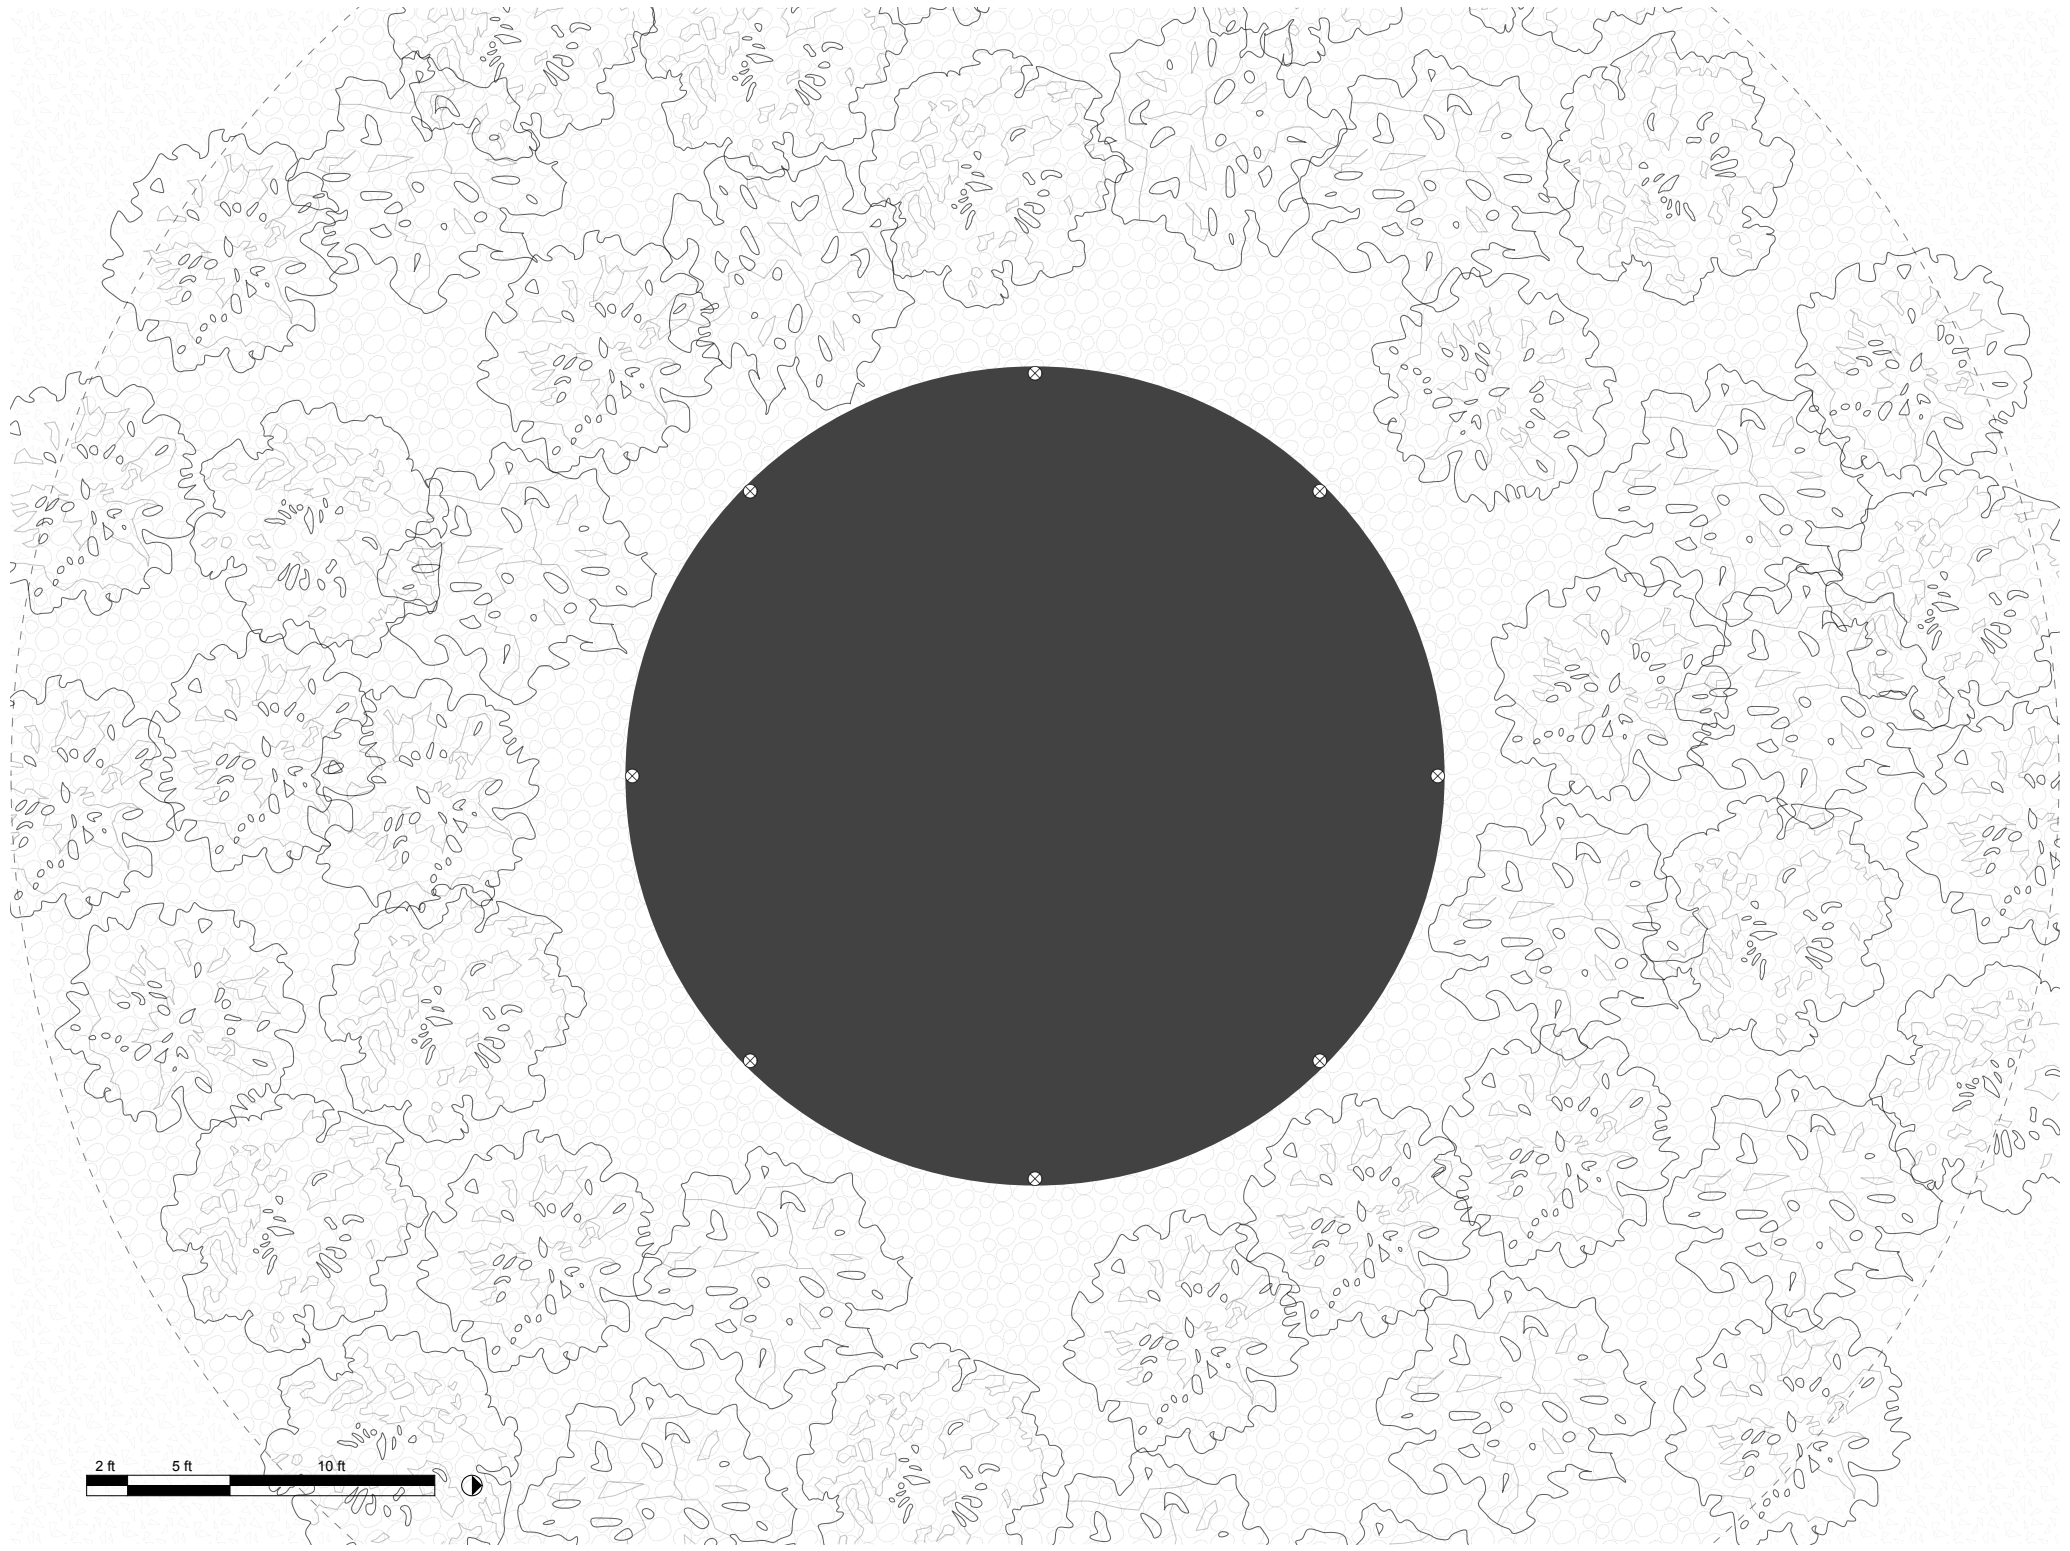

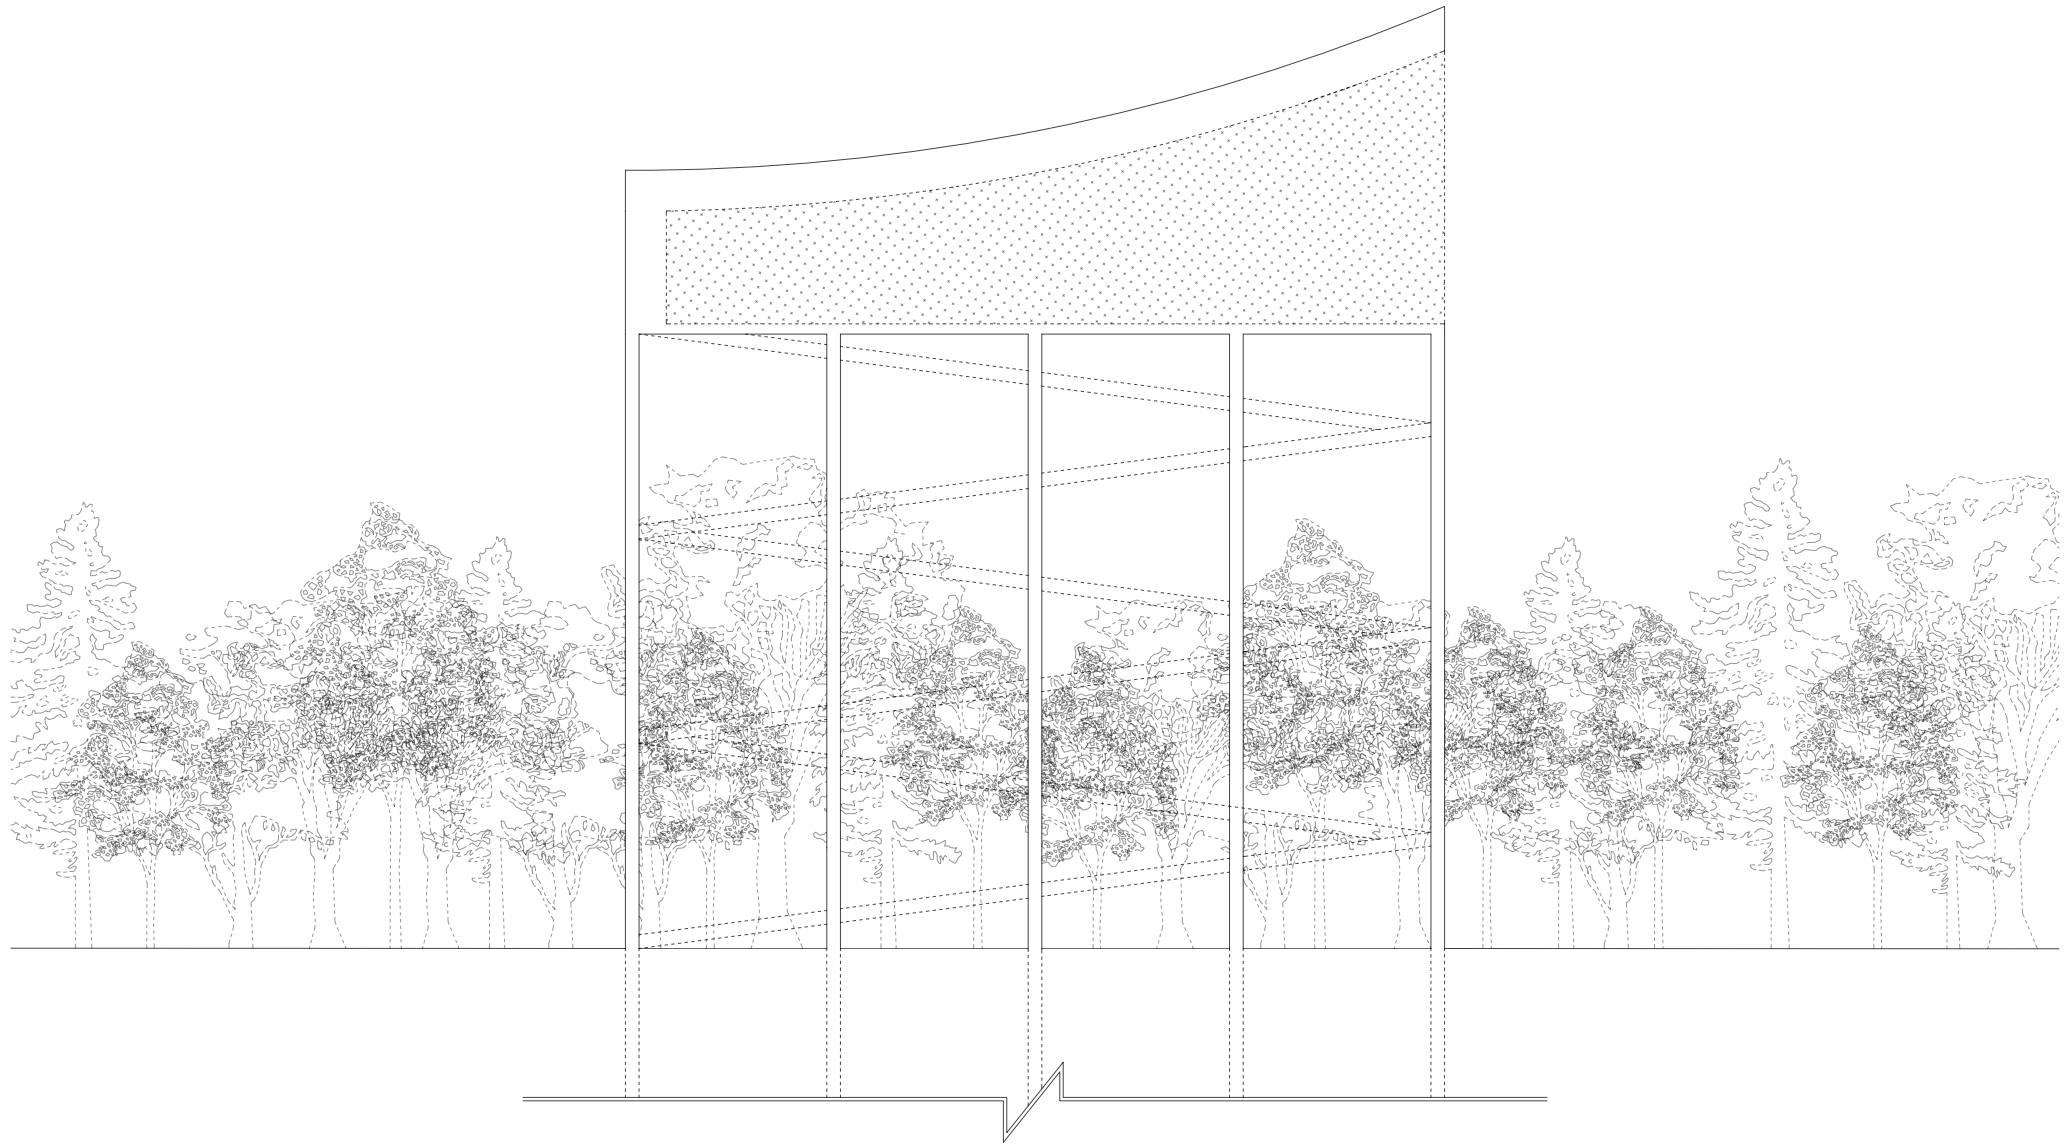

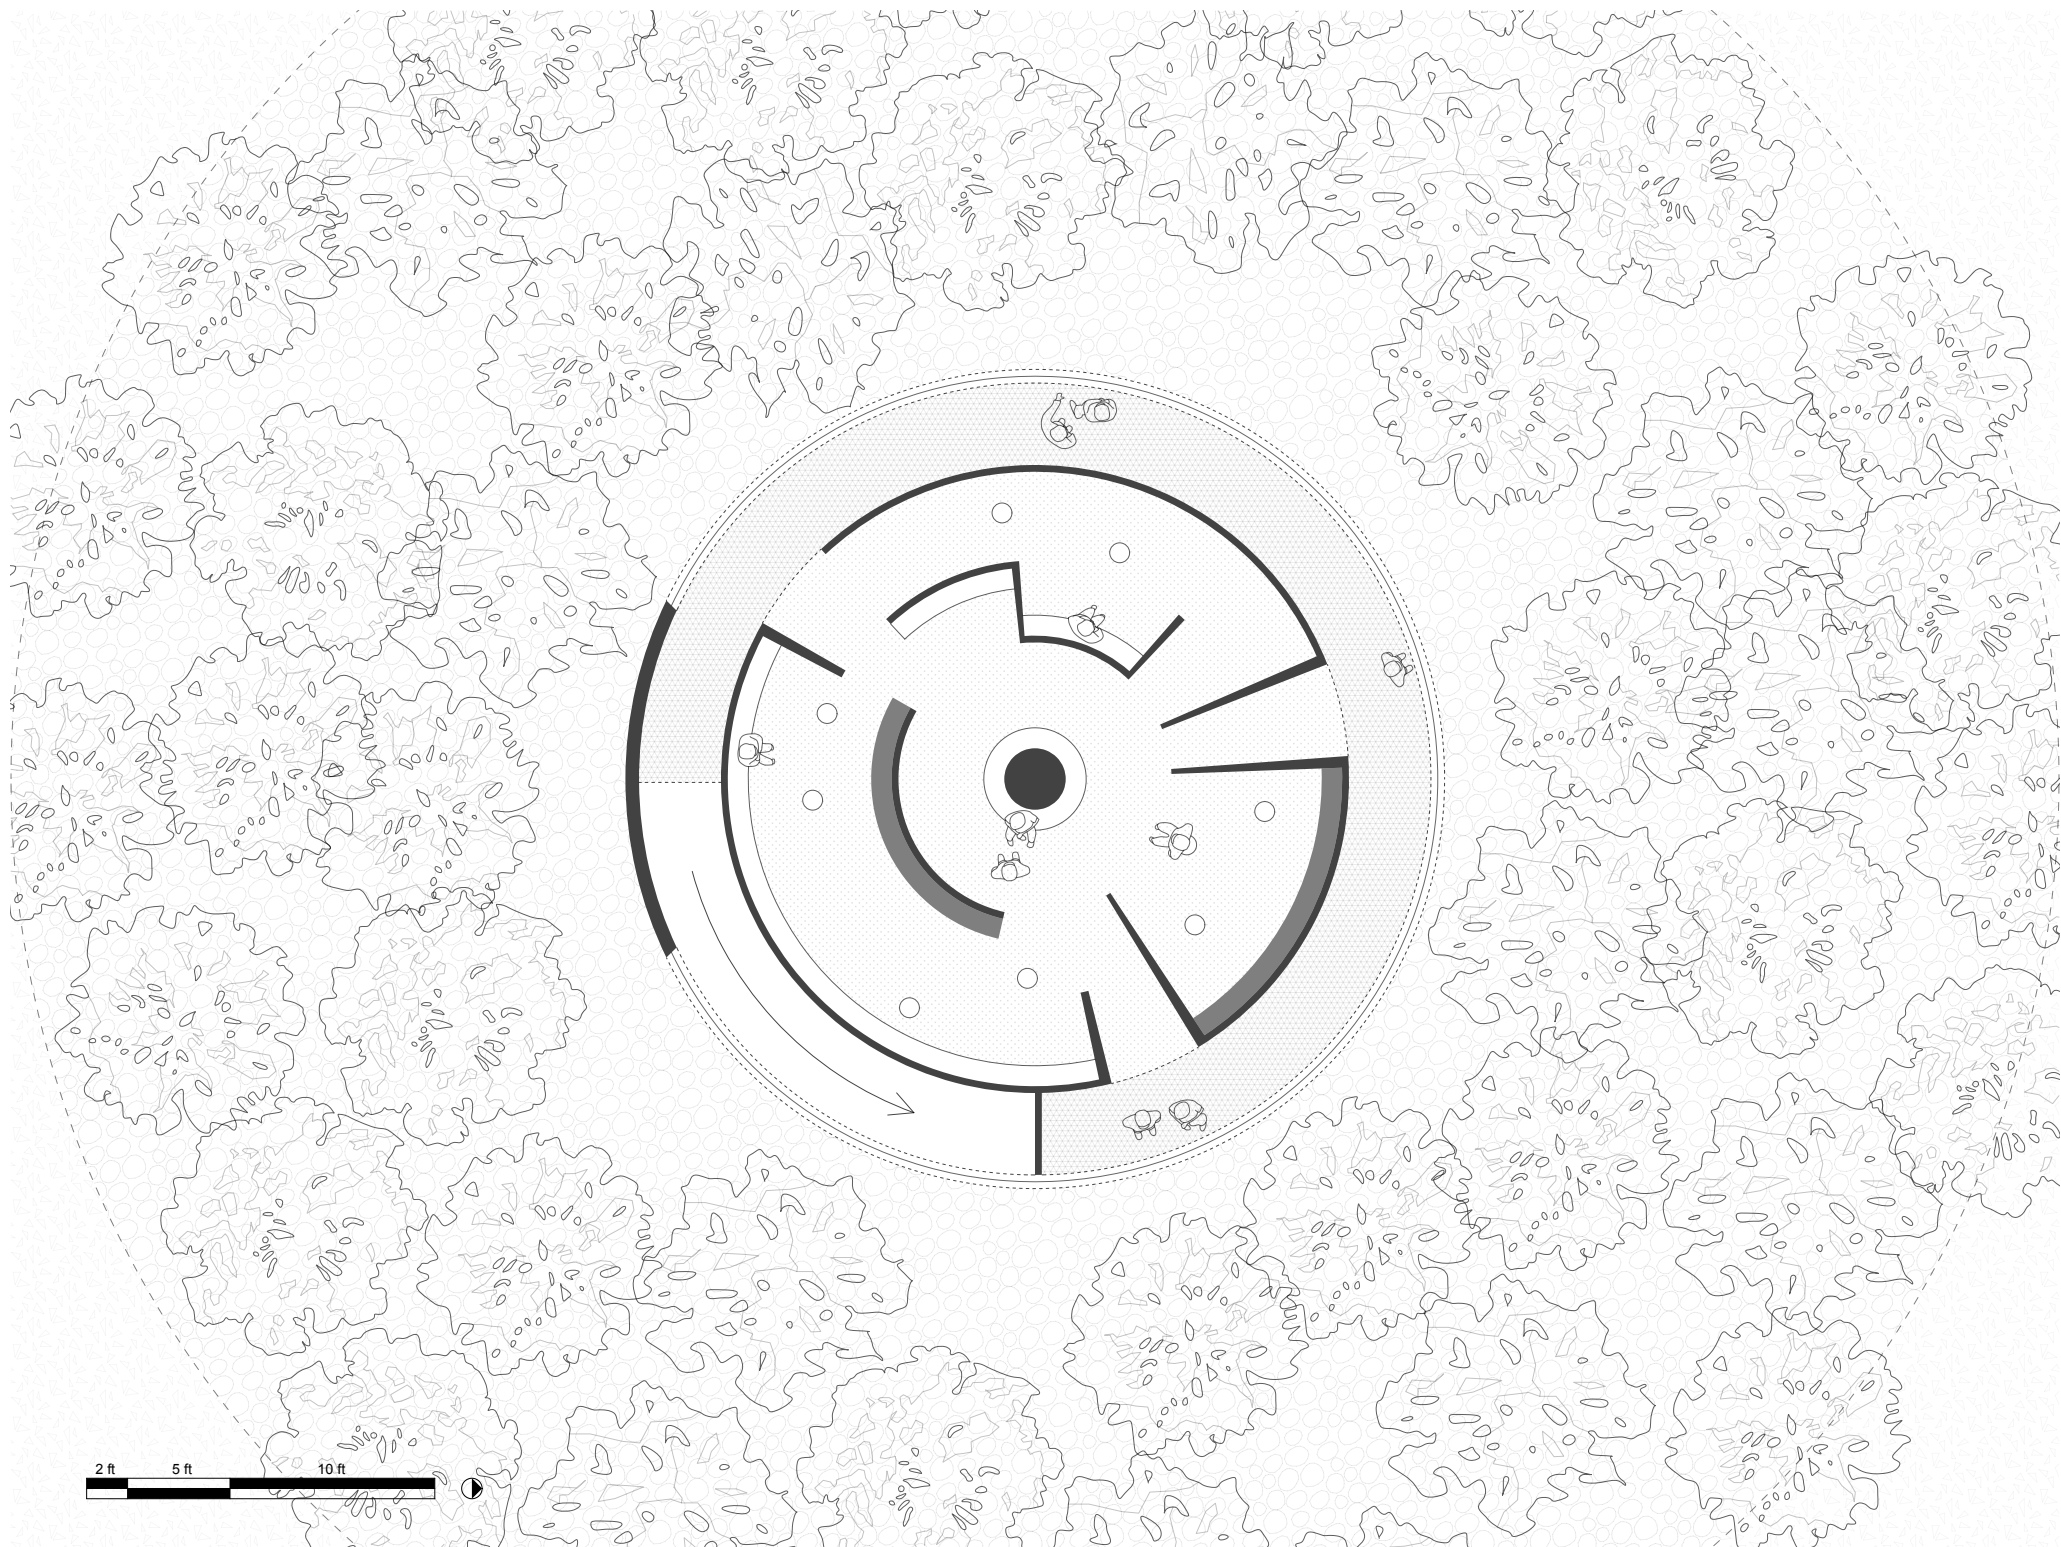

An abstract graphic featuring the word "LIBRARY" repeated multiple times in a bold, sans-serif font. The text is arranged in a staggered, overlapping manner, with some instances in red and others in black, creating a dynamic and layered visual effect. The background is white.

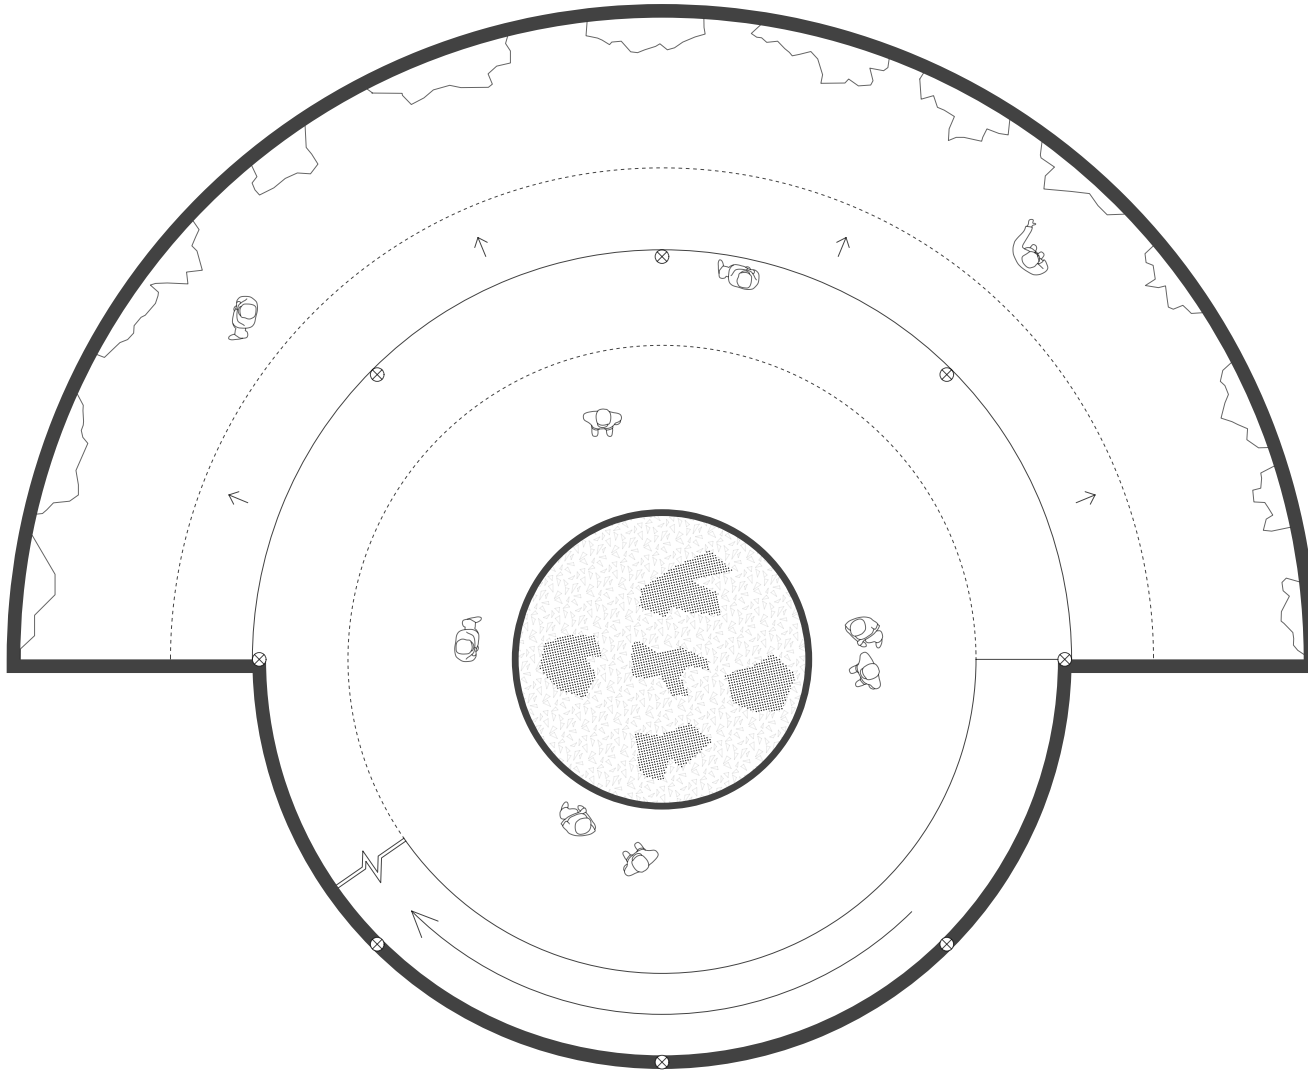

For this assignment, students designed a library by combining three of the previous architectural words, stories, and spatial strategies to create a network of spaces, one primary and two secondary sites, that respond to a community need.
